

DRIP SYSTEM TOOL

ABSTRACT OF THE DISCLOSURE

The drip system tool is similar to a pair of pliers with a piercing member and a retention member crossed in the center and rotatably fastened together. The piercing member has a handle
5 with a gripping surface on one end and an inwardly projecting piercing pin on the opposite end. The retention member has a handle with a gripping surface on one end and an inwardly projecting arcuate retention hook on the opposite end. The retention hook is of a sufficient diameter to retain a piece of irrigation hose for the formation of a hole by the piercing pin. The retention member also features an axially oriented extension formed with a cylindrical socket for
10 holding a conventional connector fitting for a drip irrigation system.
